

10th Algebra 2 – Summer Math Packet

Hi Rising Algebra 2 students and parents, Here, my friends, is a short program to help you get ready for Algebra 2. It's been over a year since Algebra 1 and you might be a little rusty. Fortunately, our Geometry text has the solution. At the end of most chapters, there is an "Algebra Review." Each one has a one-page review of some concept from Algebra 1 and then a few problems to help you practice.

So this Summer, let's do the reviews from these Chapters: 1, 2, 3, 4, 5, 6, 7, 9, 11, and 12. About once a week this Summer, read the review and work the exercises from one chapter. Then write up neat and complete solutions to the multiples of 4. Bring the packet in the Fall.

My way of rewarding your hard work is this: The packet earns you some bonus points, which you can use later in the year to enhance any test or quiz score in which you are otherwise disappointed. Change that 85 into a 95, say. You're happy, Moms happy, I'm happy. You are welcome to e-mail me math questions over the Summer.

I hope to see you in the Fall,
DrG
